

JOB WEB DEVELOPER

About Cameramanager.com B.V.

Cameramanager.com is a fast growing enterprise active in the field of software development for IP camera security (VSaaS, video surveillance as a service). The huge growth in IP camera sales has increased the interest in IP camera surveillance software.

Cameramanager.com develops and delivers complete online service for IP camera security, named

www.cameramanager.com. The platform manages 10-thousands of IP cameras worldwide. The camera

streams are being stored in a professional datacenter in Amsterdam. Cameramanager.com develops their software in a Java based environment for front-end and back-end of the software. The complete development team is housed in the Netherlands. On a daily base the team is busy with development of features like H.264, plug&play IP cameras, storage cloudbanks and many more.

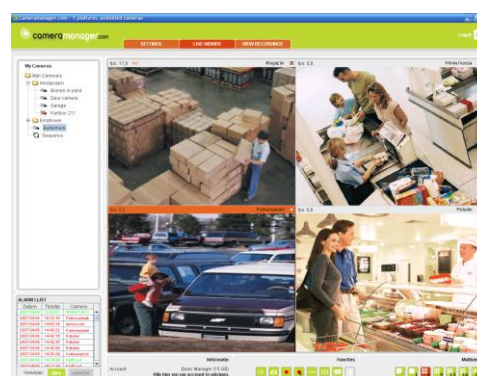

Cameramanager.com is a young and ambitious company with 14 employees located in Almere and is part of Detron, a company of 500 people. The company grows fast and has the ambition to grow towards one the most recommended international companies for video surveillance.

Interested in being part of this growth of Cameramanager.com? Apply for our job opening as Java programmer !

Job description

Cameramanager.com is looking to expand the current development team of Java programmers. We are looking for experienced and enthusiastic Java programmers to bring new innovations into the Cameramanager.com VSaaS platform. You will work on development of leading, innovative and worldclass hosted camera surveillance software. Creativity, innovation and intelligence are qualities we require from a Java programmer.

As Java programmer you will work within a team on dedicated assignments. You are in control of your own assignment and are fully responsible to develop a new feature. You're working with IP camera API interfaces, video codecs like H.264, sounds codecs and many more. There are weekly deadlines and monthly releases, so a good planning should be part of your

job. You will report to the teamleader who is a master in Java programming.

You should be expert in concurrent, distributed and parallel programming and have a high level of JavaSE knowledge and experience. All developments will after testing be used by ten thousands of users which makes programming at Cameramanager.com even more exciting!
