

What Panasonic cameras can be added as PnP?

Models: "BL-C160", "BL-C140", "BL-C111", "BL-C131", "BL-C101", "BL-C121", "BL-C210", "BL-C230", BB-HCM5xx series, BB-HCM7xx series.

Please, mind the following requirements:

- The camera should be available on the LAN, there should be DHCP server available.
- The camera should be in factory default state. No username or password set in the camera.
- The camera is not already added to the account of a customer.
- The firmware of the camera should be 3.50R00 or higher.
- The camera should have full access to the internet (or at least to our external IP range)

The adding procedure is as follows:

- Start the client application from a Windows PC on the same network as where the cameras are placed.
- Wait until a pop-up window appears asking if you want to add a camera automatically.
- Click yes and wait until the process asks to provide a name for the camera.
- Wait until the camera is added successfully.
